

 ELEKTROTERMIA

switchgear assemblies

Switchgear assemblies

For many years Elektrotermia has been manufacturing electrical switchgear assemblies for use in industrial, residential and public buildings.

Our switchgear assemblies are used both in power distribution systems and in the supply of individual devices.

They fulfil their function as a part of an intelligent building system as well as in industrial automation processes.

Comprehensive offer

Our portfolio includes:

- electrical switchgear assemblies up to 630A
- control gears
- measurement and distribution boards
- high-current switchgears up to 5000 A, from IP30 to IP55
- end-to-end facility construction services

Laboratory

Each device manufactured by us is subjected to product verification tests in the fully equipped Electrical Laboratory, in accordance with the applicable standards.

Each product is voltage tested to ensure safe operation and use.

The tests performed are confirmed by an appropriate protocol, on the basis of which we issue a Declaration of Conformity.

Projects completed

AERO Ropczyce
Biurowce Brain
Biurowce Fabryczna Office Park
Cognor Huta Stalowa Wola
Cyklotron
FCA Bielsko
FCA Tychy
Ikea Szczecin
Philips Siemianowice Śląskie
Polmos Łañcut
PZZ Niepołomice
Stadion Wisła Płock
Tunel w Świnoujściu
Valeo Skavina

Guarantee of quality

The high quality of the products offered is confirmed by the certificates and prizes awarded to us.

Our qualified staff ensures fast and reliable completion of orders, which puts us at the forefront of manufacturers of electrical switchgear assemblies.

We manufacture equipment based on nearly every power distribution system, in collaboration with leading manufacturers of electrical equipment.
